

## GUIDED NOTES – 5.8 MODELING USING VARIATION

### LEARNING OBJECTIVES

In this section, you will:

- Solve direct variation problems.
- Solve indirect variation problems.
- Solve problems involving joint variation.

### SOLVING DIRECT VARIATION PROBLEMS

Study the box in your textbook section titled “direct variation.”

- If  $x$  and  $y$  are related by the form,

$$y = \underline{\hspace{2cm}}$$

then we say that the relationship is  $\underline{\hspace{2cm}}$  variation and  $y$  varies  $\underline{\hspace{2cm}}$  with, or is proportional to, the  $n$ th power of  $x$ .

- $k$  is a nonzero constant known as the  $\underline{\hspace{2cm}}$  and can be written as  $k = \underline{\hspace{2cm}}$ .

**Try It:** Read Example 1 in the text, then answer the following.

The quantity  $y$  varies directly with the square of  $x$ . If  $y = 24$  when  $x = 3$ , find  $y$  when  $x$  is 4.

### SOLVING INVERSE VARIATION PROBLEMS

Study the box in your textbook section titled “inverse variation.”

- If  $x$  and  $y$  are related by the form,

$$y = \underline{\hspace{2cm}}$$

then we say that the relationship is \_\_\_\_\_ variation and  $y$  varies \_\_\_\_\_ with the  $n$ th power of  $x$ .

- In inversely proportional relationships, or inverse variations, the constant multiple is  $k =$  \_\_\_\_\_.
- Write out the 4 step process for solving for an unknown, given a description of an indirect variation problem.

1.

2.

3.

4.

**Try It:** Read Example 3 in the text, then answer the following.

A quantity  $y$  varies inversely with the square of  $x$ . If  $y = 8$  when  $x = 3$ , find  $y$  when  $x$  is 4.

### **SOLVING PROBLEMS INVOLVING JOINT VARIATION**

*Study the box in your textbook section titled “joint variation.”*

- Joint variation occurs when a variable varies directly or inversely with \_\_\_\_\_.

**Try It:** Read Example 4 in the text, then answer the following.

A quantity  $x$  varies directly with the square of  $y$  and inversely with  $z$ . If  $x = 40$  when  $y = 4$  and  $z = 3$ , find  $x$  when  $y = 10$  and  $z = 25$ .
